

PENSACOLA, FL—Systems integrator All Pro Sound recently completed three stadium projects: Bryant-Denny Stadium (University of Alabama, Tuscaloosa), the North End Zone expansion; Boston College Alumni Stadium AV systems upgrade; and

Jacobs Field Terrace Club. The projects range from major facilities upgrades to total systems renovation. One common factor linking these projects is the presence of Atlas Sound loudspeakers.

The Bryant-Denny expansion,

completed in August of last year, was part of a \$45 million phased project that added an upper deck to the North End Zone area with three levels of skyboxes and a glass-enclosed, luxury dining area, as well as the addition of traditional upper deck seating. Sound

for the area is provided by 200 Atlas FAP82-T ported 8-inch coaxial ceiling speakers, powered by QSC amps under Biamp Audia control.

For Boston College's Alumni Stadium, All Pro Sound completed work in August of last year on skybox and concourse systems that were part of a total system renovation for the stadium, featuring Atlas SM52-T 5.25-inch 2-way, 2-way weather-resistant speakers, Atlas FAP82-T ceiling speakers for the concourse areas, Atlas FA138T87 8-inch coaxial speakers, and Atlas SD72WV dual-cone, 8-inch ceiling speakers.

At Cleveland's Jacobs Field, home of the Cleveland Indians, All Pro Sound completed work on the

high-end Terrace Club, just in time for the team's home opening series. The multi-level Terrace Club, located at the far third base corner, is a members-only club seating 300 with an upstairs bar accommodating 250, with both areas covered sonically by 40 Atlas B161-4 4-inch in-wall nearfield speakers and 102 FAP62T 6-inch coaxial ceiling speakers.

"Atlas has a little bit of something for everything," said All Pro's lead systems designer for each of these projects, Patrick Nunnally. "That's why you see their product in all these projects."
